# A sense of place and belonging

Open Spaces™ brings a sense of place and belonging to the next generation of the open office. A palette of materials and finishes surrounds the softened geometry of each shape and surface. Standing or sitting, everything to support your day is within reach, you're relaxed and you feel at home.

There is a welcoming visual language that expresses functionality in every detail and puts a fresh face on the workplace. The integrated look and feel of every surface and material is confident and defines personal space, encouraging the movement of people and ideas.

Open Spaces shown in Sheer Beauty surfaces and storage with Designer White frames, beams and accessories. PET Felt privacy panels, mobile work cart wraparounds and hanging pegboards shown in Pewter. Noetic seating shown.

---

## Height adjustability

Open Spaces was designed from the ground up to include multi-stage height adjustable worksurfaces as either standalone desks or integrated into Office Spaces storage elements. Fixed height worksurfaces share the same leg design as height adjustable surfaces to maintain a cohesive look.

Personalize your space with an overhead rail that supports a range of productivity and privacy solutions, including PET Felt pegboards and tackable screens, whiteboards, hanging planters, and low-voltage LED lighting.

Additional information can be found on the Global [website](#).

## A softer, quieter environment

PET Felt on vertical surfaces, including pegboards and privacy screens, provides sound absorbency to help reduce noise. A mobile work cart with an upholstered cushion brings people together for a quick conversation.

## Personal space

The Open Spaces beam can be configured in a linear, 90° or 120° orientation (shown), complete with matching worksurfaces and a wide range of finishes. PET Felt or tempered glass screens can be mounted directly to the beam for privacy.

---

## Zig when others zag

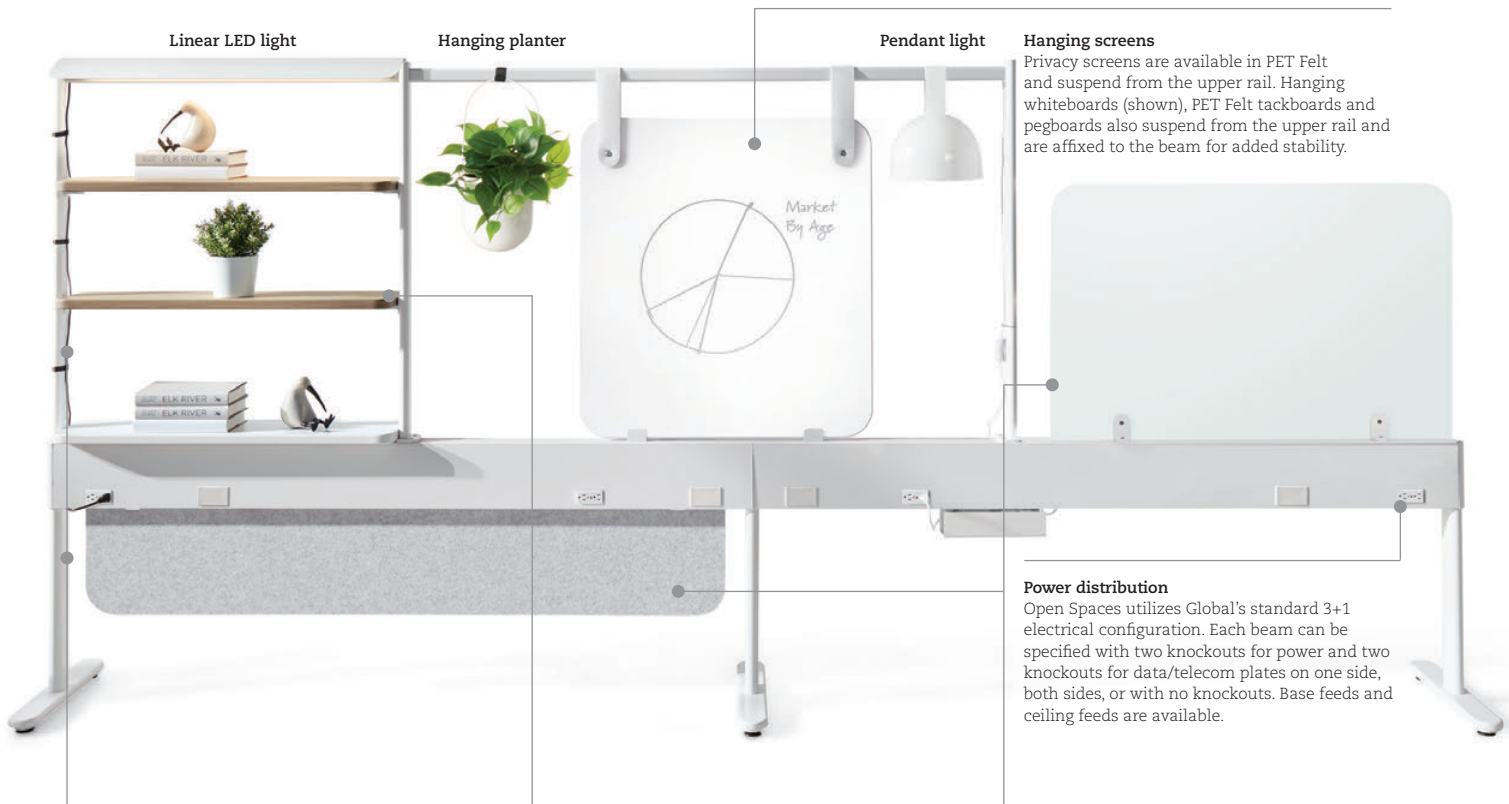

Two beam heights are offered to keep cables and plug-ins below the surface at all times. The 21" high beam (shown) ensures there is no interference with the lower range of height adjustable worksurfaces. The 27" high beam sits just below fixed height surfaces, providing easy access when connecting electrical and communication devices.

Additional information can be found on the Global [website](#).

## Beam features

### Beams and beam supports

Beams are available in two planning heights: 21" H with below-surface power for height adjustable surfaces and 27" H (shown) with below-surface power for fixed height surfaces. Beams distribute power and communications while providing structural support for semi-supported worksurfaces and vertical elements.

### Vertical posts and shelving

Vertical posts are structural elements and are available in four heights. Select post types integrate shelving (shown), while others are available without drilling, allowing the upper rail to suspend various screen types and accessories. Vertical posts can be mounted on- or off-module anywhere along the beam.

### Beam mounted screens

Upmounted screens are available in PET Felt and laminated glass (frosted shown) and can be mounted on- or off-module anywhere along the beam. Undermounted screens are available in PET Felt and function as modesty panels (shown).

Beams can be specified with or without knockouts for power (shown) and data on one or both sides.

Mounting brackets are available for upmounted laminated glass privacy screens (shown) and for mounting PET Felt privacy screens to the beam.

Beams are supported by T legs (shown), post legs and laminate gables, available in a wide range of finishes.

# It's in the details

## Beam accessories

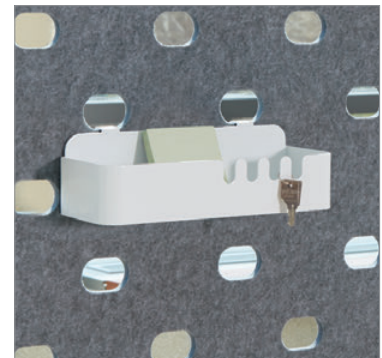

PET Felt pegboards suspend from the horizontal rail and attach to the beam for stability, providing a versatile and customizable system for hanging a range of accessories.

Hanging document holder

Hanging magnetic whiteboard

Hanging tray

Hanging hook
